

ESTE INFORME CONTIENE INFORMACIÓN IMPORTANTE ACERCA DE SU AGUA POTABLE. HAGA QUE ALGUIEN LO TRADUZCA PARA USTED, O HABLE CON ALGUIEN QUE LO ENTIENDA.

October 29, 2024

Dear Valued Customer,

At West Virginia American Water, providing safe, reliable water service is our top priority, and we're reaching out to you because our records indicate a portion or all of the water service line serving the property listed below is made of lead, galvanized steel, or your service line material is "unknown."

West Virginia American Water tests for lead in accordance with regulatory requirements. The results of these tests indicate the water meets drinking water standards related to lead. In addition, we take steps to reduce the potential of lead leaching from service lines and household plumbing into the water by monitoring our treatment processes and adding a corrosion inhibitor where needed. In some cases, however lead levels might be detected at some properties due to corrosion of:

- Lead service line serving older homes and buildings
- Lead solder in household plumbing installed before state adoption of the Environmental Protection Agency (EPA) lead ban in June 1988
- Some faucets manufactured prior to 2014

To help reduce our customers' potential exposure to lead, we are committed to replacing lead service lines, and in some cases galvanized service lines, over the course of the next several years. The service line is the pipe that connects a home or business to the water main in the street. A portion of the service line serving your property is owned by West Virginia American Water; the other portion is owned by the property owner.

Utility-owned vs. Customer-owned Portion of the Service Line

Please note: This diagram is a generic representation. Variations may apply.

ABOUT YOUR SERVICE LINE

Attention landlords and property owners: If you are the account holder, but do not reside at the below address, please share this information with those receiving water service at this location.

- **Premise#:** 9999999999 **Service Type:** Domestic Water
- **Property:** 789 Your Street, Charleston, WV
- **West Virginia American Water Service Line Material:** LEAD
- **Customer Owned Service Line Material:** GALVANIZED REQUIRING REPLACEMENT
- **Water System ID#:** WV3302016
- **Water System Name:** Kanawha Valley Water System

If your service line is:

- **Lead:** West Virginia American Water has a lead service line replacement program that will replace the company- and customer-owned service lines at no direct cost to you. Information on this program is available at westvirginiaamwater.com/Leadfacts. If you are planning to replace your customer-owned lead service line, contact us at leadfreeWV@amwater.com prior to replacement so that we can coordinate our efforts.
- **Galvanized Requiring Replacement:** This indicates that the service line is or was potentially at one time connected to a lead service line. West Virginia American Water will work with you to determine if your galvanized line qualifies for our replacement program. Learn more at westvirginiaamwater.com/Leadfacts.
- **Lead Status Unknown:** Due to age or lack of records, the service line material is unknown but may be lead. Please visit westvirginiaamwater.com/Leadfacts for instructions on how to determine and self-report the customer-owned service line material entering your household/building.

HEALTH EFFECTS OF LEAD

According to the U.S. Environmental Protection Agency, exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

STEPS YOU CAN TAKE TO REDUCE YOUR POTENTIAL EXPOSURE TO LEAD IN DRINKING WATER

You cannot see, smell or taste lead, and boiling water will not remove lead. Here are steps you can take to reduce your potential exposure if lead exists in your home plumbing.

- 1. Replace any lead service lines.** If you have a lead service line, replace it.
- 2. Flush your taps.** The longer the water lies dormant in your home's plumbing, the more lead it might contain. If the water in your faucet has gone unused for more than 6 hours, flush the tap with cold water for 30 seconds to 2 minutes before drinking or using it to cook. To conserve water, catch the running water and use it to water your plants.
- 3. Use cold water for drinking and cooking.** Hot water has the potential to contain more lead than cold water. If hot water is needed for cooking, heat cold water on the stove or in the microwave.
- 4. Routinely remove and clean all faucet aerators.**
- 5. Check to see if your interior plumbing or faucets contain lead and replace any that do.** Look for the "Lead Free" label when replacing or installing plumbing fixtures.
- 6. Follow manufacturer's instructions for replacing water filters** in household appliances, such as refrigerators and ice makers, as well as home water treatment units and pitchers. Look for NSF 53 certified filters.
- 7. Flush after plumbing changes.** Changes to your service line, meter, or interior plumbing may result in sediment, possibly containing lead, in your water supply. Remove the aerator from each faucet and run the water for 3 to 5 minutes.
